Journal Citation Indicator (JCI) NEW METRIC

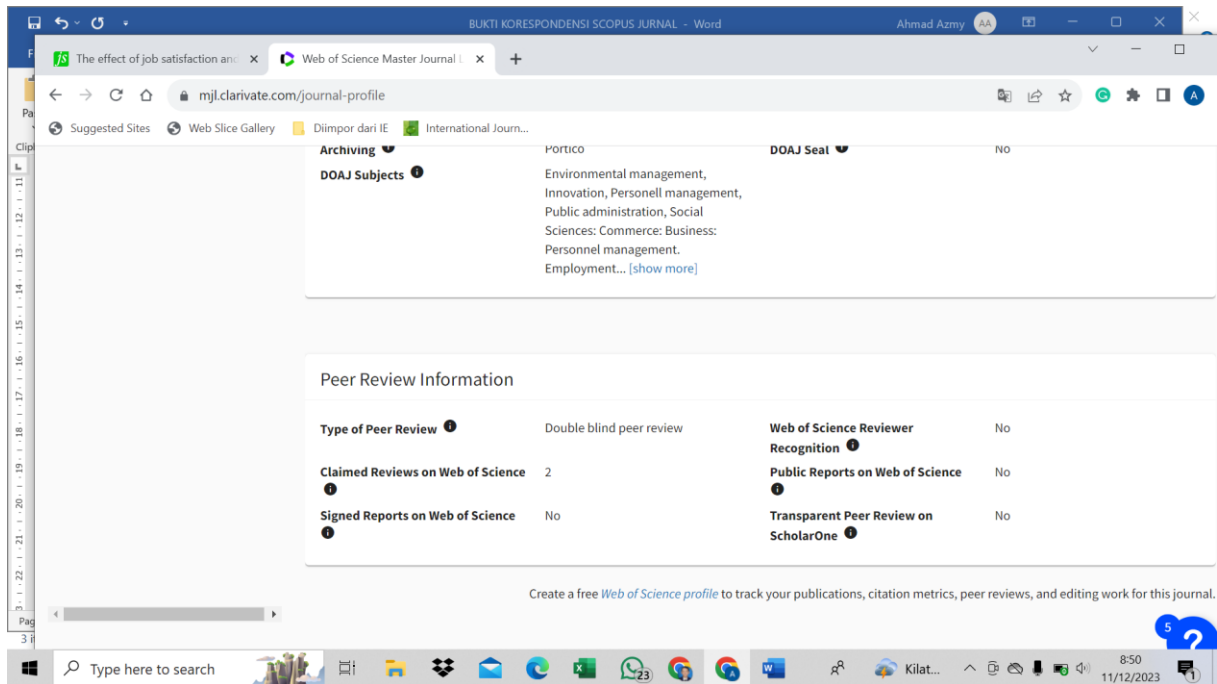

The Journal Citation Indicator is a measure of the average Category Normalized Citation Impact (CNCI) of citable items (articles & reviews) published by a journal over a recent three year period. It is used to help you evaluate journals based on other metrics besides the Journal Impact Factor (JIF).

Reviewer's declaration
I do not know the identity of the Author/s of the reviewed article

- I propose to put the research model in the Literature Review and Hypothesis Development section (instead of the Method section)
- I also propose to put respondent profiles in the Method section (instead of the Results and Discussion section)
- Separate the Results and Discussion sections
- The hypotheses use the phrase 'affects', not 'relationship' or 'correlation'. Explain more precisely what the basis was for verifying the effect (affects) of one variable on another.
